

TRAN NHAT TAN

PRODUCT & TECHNICAL SPECIALIST | Technical BA | System Integration

0896696704 | trannhattanftp@gmail.com | Ho Chi Minh City, Vietnam

PROFILE / PORTFOLIO: <https://tran-nhat-tan.vercel.app/>

PROFESSIONAL SUMMARY

Product & Technical Specialist with hands-on experience across smart mobility, automated fare collection, IoT, embedded systems, edge computing, and operational technology. Skilled at translating real-world operating needs into workflows and technical specifications, coordinating Mobile/Backend/device integrations, supporting deployment and acceptance, and controlling production operations. Strong technical foundation in C/C++, embedded Linux, system integration, payment flows, log analysis, and troubleshooting.

CORE COMPETENCIES

PRODUCT / BA	TECHNICAL	DELIVERY & OPS
Requirement analysis; workflow & process design; functional specification; UI/UX flow; UAT & acceptance	C/C++; ESP32/embedded; Linux/Armbian; MQTT/IoT; API & system integration; RTSP/Shinobi; Node-RED	Deployment coordination; production monitoring; incident handling; log analysis; stakeholder coordination; technical documentation

PROFESSIONAL EXPERIENCE

Product & Technical Specialist / Technical BA | GoLabs / VSF 2025 - Present

- Contribute across end-to-end product and project delivery: requirement analysis, process design, technical solution definition, testing, deployment, acceptance, and production operations.
- Coordinate across customers, transport operators, Mobile/Backend/device teams, payment partners, and field deployment teams to resolve requirements and technical issues.
- Design operational workflows and technical processing logic; prepare user guides, technical documentation, acceptance materials, and operating procedures.
- Monitor production systems, analyze logs and transaction flows, coordinate incident resolution, and support continuous improvement of operational stability.

Hardware Technician / Technical Support | PHA Distribution Jun 2024 - Oct 2024

- Developed and supported a truck camera monitoring solution using Stonkam APIs and AST Remote integration for driver, cargo, and vehicle monitoring.
- Worked directly with partners and customers; supported installation, deployment, troubleshooting, and a pilot on 10 Howo A7 trucks for HuyAnh Rubber.

SELECTED PROJECT EXPERIENCE

GoAFC - Automated Fare Collection Dec 2024 - Present

Role focus: System Integration, Deployment & Production Operations

Large-scale AFC platform for public transport covering onboard POS devices, cashless payments, passenger applications, electronic transport orders, and operational workflows.

- Supported staged rollout from initial T10 validation to approximately 1,000 buses in Ho Chi Minh City, including a first rollout of ~500 buses across 10 routes by Apr 2025.
- Supported and validated payment integrations across Mastercard, NAPAS, VNPT Money, Viettel Money, ZaloPay, ShopeePay, and MoMo.
- Contributed to Multigo student fare linking, eLVC digitization, regional rollout to Binh Phuoc, and process standardization for VinBus operations.

Impact: Helped scale GoAFC from initial deployment to a multi-operator, multi-payment production platform while maintaining delivery schedules and operational continuity.

Bus Stop Smart LED Dec 2024 - Jan 2026

Role focus: Hardware Redesign & Embedded Product Development

Smart passenger-information display for bus stops using a custom controller, HUB75 LED panels, embedded software, and IoT connectivity.

- Redesigned the controller schematic and PCB, then developed the embedded product logic in C/C++.
- Integrated and validated the hardware/software prototype, reaching a first working demo in Aug 2025.
- Completed technical handover for VinBus use at bus stops in Vinhomes urban areas in Jan 2026.

Impact: Took the product from inherited technical baseline through hardware redesign, embedded development, prototype validation, and operational handover.

SELECTED PROJECT EXPERIENCE - CONTINUED

Byteview - Mini Edge Video Server Dec 2024 - Present

Role focus: Linux / Edge System Integration & Security Hardening

Compact Rockchip RK3318-based edge server for camera connectivity, RTSP viewing, local video processing, highlight generation, and remote management.

- Rebuilt the platform on Armbian; configured FRP Client, Shinobi camera services, QR-based real-time viewing, and Node-RED highlight workflows.
- Designed the solution for sports clubs such as billiards, table tennis, and badminton, where live viewing and saved highlights are required.
- Responded to repeated security incidents by introducing per-device FRP token authentication and reducing public exposure through private access configuration.

Impact: Moved the platform from rebuild and integration into commercial operation while improving remote-access security and deployability.

School Bus Jul 2026 - Present

Role focus: End-to-End Product Definition & Technical BA

Student transportation solution for VinBus School Bus covering check-in/check-out, school monitoring, mobile application flows, and real-world operations.

- Built the initial operating workflow on 3 Jul, product infographic on 4 Jul, and application UI/UX flows by 10 Jul.
- Completed technical flow design for Mobile and Backend teams by 18 Jul, then received, tested, and piloted the product by 30 Jul.
- Supported production deployment and ongoing operations for VinBus School Bus in Quang Ninh from Aug 2026.

Impact: Delivered process design, UI/UX, technical workflow definition, testing, and pilot preparation within a highly compressed one-month timeline.

GoERP - Enterprise Resource Planning Jul 2026 - Present

Role focus: Process Analysis & Product Design Foundation

New enterprise-system initiative focused on standardizing operational workflows and transforming them into structured digital processes.

- Analyze existing operational workflows, user roles, processing steps, and exception scenarios.
- Structure process flows as the foundation for subsequent UI/UX design and system development.

Impact: Established the initial workflow foundation for a new enterprise product and its future UI/UX implementation.

EDUCATION

B.Sc. - Electronics & Telecommunications / Embedded Systems | **University of Science - VNU HCMC** 2020 - 2024

GPA: 6.5/10

CERTIFICATIONS & LANGUAGES

CERTIFICATIONS

- VSTEP B1 - 2023
- Office Informatics Certificate - 2021

LANGUAGES

- Vietnamese - Native
- English - Working proficiency (VSTEP B1)
